PROFESSIONAL SUMMARY

Software Engineering graduate with hands-on experience across full-stack development, quality assurance, and UI/UX design. Builds backend services, REST APIs, and relational/NoSQL databases (Laravel, Node.js/Express, PostgreSQL, MySQL, Redis) alongside frontend interfaces in React and Next.js, then validates functionality through structured manual and API testing in Postman. Designs user flows and Figma prototypes to shape usable interfaces ahead of development. Contributes across the full software development lifecycle, from requirements and design through implementation, testing, and deployment.

EXPERIENCE

UI/UX Design Intern | VOLTIX Internship Program

Sep 2026 – Present | UI/UX Design track, 1-month internship

- Participating in practical UI/UX design tasks and challenges as part of a one-month internship program.
- Applying user-centered design principles to create intuitive and usable interfaces.

Backend Developer Intern | Petra Marketing Solutions

Jul 2026 – Aug 2026 | 6-week internship

- Architected and implemented RESTful APIs for products, orders, authentication, and user management using PHP and Laravel 13 for a production-style e-commerce backend.
- Built and executed structured Postman test suites covering endpoint requests, responses, validation, and edge cases, strengthening manual QA coverage prior to release.
- Designed and managed the MySQL database schema and integrated core application tables in a XAMPP development environment to improve data integrity.
- Debugged backend services, database queries, and application logic end-to-end to resolve integration defects, then deployed the application to a live production server with environment configuration and post-deployment checks.

PROJECTS

CVision — Smart Team Role Assignment Tool

Graduation Project — Team Lead

- Led a 3-person multidisciplinary team to deliver a working AI-assisted tool, coordinating scope, task assignment, and Figma prototyping across backend, database, and UI/UX workstreams.
- Built core backend functionality and documented RESTful APIs using Python, with specifications maintained through Swagger/OpenAPI.
- Integrated the Google Gemini API into the backend recommendation flow to enable smart role-matching and team recommendations.
- Designed and managed relational database schemas across 2 systems, PostgreSQL and MySQL, to support multi-team data models.

E-Commerce Platform

Backend Developer & QA Tester

- Developed backend business logic across 6 functional areas — products, categories, brands, orders, authentication, and user management — using Laravel and RESTful APIs.
- Identified functional, UI, and API defects, including authorization vulnerabilities and pricing/discount calculation errors, by designing and executing positive, negative, and edge-case test scenarios in Postman.
- Reduced regression risk by verifying developer fixes against original bug reports, documenting reproduction steps, expected vs. actual results, severity, and business impact.

Utado — Music Social Platform

Full-Stack Developer & UI/UX Designer

- Co-built a Letterboxd-inspired social platform for music discovery using Next.js, Node.js, Express, TypeScript, PostgreSQL, and Redis.
- Designed the product's UI/UX: hand-sketched user flows and built interactive Figma prototypes (14+ screens) covering onboarding, profiles, ratings/reviews, and feeds ahead of development.
- Implemented secure authentication using JWT access and refresh tokens, supporting user profiles, ratings, reviews, and personalized feeds.
- Designed and managed PostgreSQL schemas and migrations to support 5 core social features: playlists, search, ratings, reviews, and activity feeds.

TECHNICAL SKILLS

Software Development

Backend & APIs: Node.js, Express.js, Laravel, PHP, Python, RESTful APIs, Swagger/OpenAPI, JWT Authentication & Authorization, Business Logic Design

Frontend: React, Next.js, HTML5, CSS3, Responsive Design

Databases: PostgreSQL, MySQL, Redis, SQL, Database Design, Schema Design, Migrations

QA & Testing

Manual Testing, Functional Testing, API Testing, UI Testing, Regression Testing, Test Case Design (Positive / Negative / Edge-Case), Bug Reporting, Defect Lifecycle Documentation, Basic Security Testing (OWASP Awareness), Postman

UI/UX Design

Figma (Prototyping & Design), User Flow Mapping, UI Design, UX Collaboration

Programming Languages

Java, Python, C#, C++, PHP, JavaScript

Tools

Git, GitHub, Jira (Beginner), Trello, Chrome DevTools

CERTIFICATIONS & TRAINING

ISTQB Certified Tester Foundation Level (CTFL) — In Progress
Cyber Warriors Training — NCSCJO
Introduction to Python — Pioneers Academy
Biomedical Simulation Using Unity 3D — BioMed Squad
Arduino 99 Training — IEEE RAS BAU

EDUCATION

Bachelor of Software Engineering — Hashemite University | GPA: 3.28 | 2022–2026

LANGUAGES

Arabic: Native | English: B2 (Upper-Intermediate)
