PROFESSIONAL SUMMARY

Backend-focused Software Engineering graduate combining hands-on API and database development (Laravel, Node.js/Express, SQL and NoSQL data stores) with hands-on QA rigor — trained to catch the authorization gaps and business-logic bugs most junior backend developers miss before they ship. Built and deployed full-stack systems end-to-end, from schema design through JWT authentication to production deployment.

EXPERIENCE

Backend Developer Intern | Petra Marketing Solutions

Jul 2026 – Aug 2026

- Delivered a production-style e-commerce backend by architecting and implementing RESTful APIs for products, orders, authentication, and user management using PHP and Laravel 13.
- Improved manual QA efficiency by building and executing structured Postman test suites covering endpoint requests, responses, validation, and edge cases.
- Improved data integrity by designing and managing the MySQL database schema and integrating core application tables in a XAMPP development environment.
- Resolved business-logic and integration defects by debugging backend services, database queries, and application logic end-to-end prior to handoff.
- Deployed the completed application to a live production server by configuring environment settings and performing post-deployment functionality checks.

PROJECTS

CVision — Smart Team Role Assignment Tool | Graduation Project Team Lead

- Led a 3-person multidisciplinary team to deliver a working AI-assisted tool by managing scope, task assignment, and integration across backend, database, and UI/UX workstreams.
- Built core backend functionality and documented RESTful APIs using Python, with API specifications maintained through Swagger/OpenAPI.
- Enabled smart role-matching and team recommendations by integrating the Google Gemini API into the backend recommendation flow.
- Designed and managed relational database schemas across PostgreSQL and MySQL to support multi-team data models and project requirements.

E-Commerce Platform | Backend Developer & QA Tester

- Developed backend business logic for products, categories, brands, orders, authentication, and user management using Laravel and RESTful APIs.
- Identified functional, UI, and API defects — including authorization vulnerabilities and pricing/discount calculation errors — by designing and executing positive, negative, and edge-case test scenarios in Postman.
- Reduced regression risk by verifying developer fixes against original bug reports, documenting reproduction steps, expected vs. actual results, severity, and business impact.

Utado — Music Social Platform | Full-Stack Developer & UI/UX Designer

- Co-built a Letterboxd-inspired social platform for music discovery using Next.js, Node.js, Express, TypeScript, PostgreSQL, and Redis.
- Implemented secure authentication using JWT access and refresh tokens, supporting user profiles, ratings, reviews, and personalized feeds.
- Improved response performance for frequently accessed data by introducing Redis caching alongside PostgreSQL.
- Designed and managed PostgreSQL schemas and migrations to support social features including playlists, search, ratings, reviews, and activity feeds.

CORE SKILLS

Backend: Node.js, Express.js, Laravel, PHP, Python, RESTful APIs, Swagger/OpenAPI, JWT Authentication & Authorization, Business Logic Design

Databases: SQL (PostgreSQL, MySQL), NoSQL (Redis), Schema Design, Migrations

Languages: Java, Python, C#, C++, PHP, TypeScript, JavaScript

Testing & QA: Postman, Manual & Functional Testing, API Testing, Regression Testing, Test Case Design, Basic OWASP Security Awareness

Tools: Git, GitHub, Postman, Jira (Beginner), Trello, Chrome DevTools

Frontend (Basic): React, Next.js, HTML5, CSS3, Responsive Design

CERTIFICATIONS & TRAINING

- ISTQB Certified Tester Foundation Level (CTFL) — In Progress
- Cyber Warriors Training — National Cyber Security Center (NCSCJO)
- Introduction to Python — Pioneers Academy
- Biomedical Simulation Using Unity 3D — BioMed Squad
- Arduino 99 Training — IEEE RAS BAU

EDUCATION

Bachelor of Software Engineering — Hashemite University | GPA: 3.28 | 2022–2026

LANGUAGES

Arabic: Native | English: B2 (Upper-Intermediate)
